Installing Mageia using a Tiny Boot Image

1. Introduction

1.1. NetInstall Media

1.1.1. Description

These minimal ISO's contain:

- less than 100 MB and are convenient if bandwidth is too low to download a full DVD, or if you have a PC without a DVD drive or unable to boot from a USB stick.
- no more than that which is needed to a) start the DrakX installer and b) find DrakX-installer-stage2 and other packages that are needed to continue and complete the install.

The required source packages may be on a PC hard disk, a local drive, a local network or on the Internet.

Installation via encrypted wifi or bluetooth is not supported.

1.1.2. Availability

There a two versions of the NetInstall media:

- netinstall.iso For those who prefer not to use non-free software, this ISO contains only free software.
- **netinstall-nonfree.iso** This ISO additionally includes proprietary device drivers, which may be required for your network device, disk controller, etc.

Both versions are available in the form of separate 32-bit and 64-bit ISO's. See here: <u>https://www.ma-geia.org/downloads/</u>

1.1.3. Preparation

After downloading the image, burn it to a CD/DVD or, if you prefer to put it on a USB stick, follow the instructions here: <u>https://wiki.mageia.org/en/Installation_Media#Dump_Mageia_ISOs_on_an_USB_stick</u>

1.2. Installation Stages

The installation is carried out in two stages:

- **Stage 1** This is the pre-Installation stage. You will need to provide the method and details for accessing the medium containing the files to be used for the installation. If the method involves a server, then the network connection will be activated.
- **Stage 2** This is the actual Installation stage, which will automatically commence once a connection to the installer files has been established.

During Stage 1, nothing will be written to your Hard Disk, so it is safe to quit at any point during Stage 1 if you wish. You can do so by pressing **Ctrl**+**Alt**+**Del**.

You can use Alt+F3 to read the logs and Alt+F1 to return to the installer screen.

Unlike when installing from DVD or LiveCD, during the first part of the installation (**Stage 1**), you will be asked to type things. During this stage, your keyboard will operate as per an <u>American keyboard</u> [https://en.wikipedia.org/wiki/Keyboard_layout#United_States] layout. This can be very confusing when you need to type names and paths.

2. Stage 1 (Pre-installation Stage)

2.1. Boot

The particular *Welcome Screen* that you will see when booting with the NetInstall media depends on whether you are booting on a BIOS or UEFI system. See the following two screenshots:

```
Welcome to Mageia install help
In most cases, the best way to get started is to simply press the <code><Enter></code> key.
If you experience problems with standard install, try one of the following
install types (type the highlighted text and press (Enter)):
    text for text installation instead of the graphical one.
0
    linux for standard graphical installation at normal resolution.
linux vga=785 for low resolution graphical installation.
0
To repair an already installed system type rescue followed
bu ≺Enter≻.
You can also pass some <specific kernel options> to the Linux kernel.
For example, try linux noapic if your system has trouble operating
your network adapter correctly.
NOTE: You cannot pass options to modules (SCSI, ethernet card) or devices such as CD-ROM drives in this way. If you need to do so, use noauto mode.
[F1-Help] [F2-Advanced Help]
boot: _
```

Irudia 1. BIOS Welcome Screen

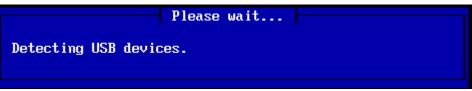

When booting up, you can choose to read the advanced help by pressing F2 and return to the installer screen by pressing F1. Otherwise, the boot will continue with default settings.

Irudia 2. UEFI Welcome Screen

• Use the arrow keys to highlight *Start Mageia Install* and then press **Enter**.

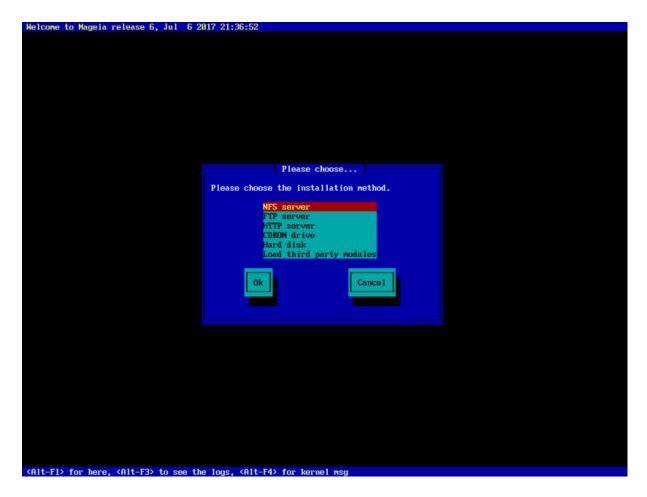

For both BIOS and UEFI systems, you will then see a pop-up notification saying that USB devices are being detected:

2.2. Installation Method

You can now choose an installation method via CDROM/HDD or Server (NFS, FTP or HTTP).

You also have the option to load third-party modules at this point.

- Move up or down the list using the arrow keys until the appropriate method of installation is highlighted.
- Press the **Tab** key until *Ok* is highlighted and then press **Enter**.

2.2.1. Server

- If you don't know what to choose for a Network Installation, choose FTP server.
- On an enterprise network, FTP and rsync may be blocked, so using *HTTP server* is a good choice in this case.

After choosing any of the server options you will automatically proceed to the <u>Network Connection</u> section.

2.2.2. CDROM/HDD

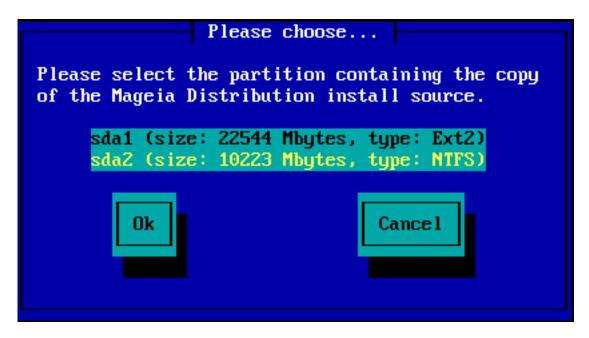

If you choose to install from either a CDROM or hard disk (or USB stick), a scan for storage devices will be performed:

• First, select the relevant hard drive (or USB stick)

• Followed by the relevant partition

• Then specify the directory or the file name of the ISO

Leaving this open, or using the directory is easier, because the installer then presents you with a list of directories and files from which you can make your selection using the up and down arrows, as seen in the second of the following images.

Once the information has been provided for the location of the ISO, either on CDROM or HDD, you will automatically proceed to <u>Stage 2</u> (the actual installation stage).

2.2.3. Load Third-Party Modules

If you wish to *Load third-party modules*, then you will be asked for the location of the directory containing the modules:

2.3. Network Connection

2.3.1. Connection Device

If you chose any of the server options at the *Installation Method* step, you will then be asked to choose a network device:

2.3.2. Connection Type

Now you need to choose whether the network device will use a DHCP, Static or ADSL connection:

Please choo	se
Please select your network	connection type.
DHCP	
Static ADSL	
Ok	Cancel

If you are unsure which option is suitable, then you should probably accept the default option (DHCP).

2.3.3. Host/Domain Names

If necessary, you can now supply your Host and Domain names:

Please fill in entries
If the DHCP server needs to know you by name; please fill in this information. Valid answers are for example: 'mybox' for hostname and 'mynetwork.com' for domain name, for a machine called 'mybox.mynetwork.com' on the Internet.
Host name
Domain name
Ok Cance 1

• If you are unsure what this means then you can just leave the fields blank, highlight *Ok* and press **Enter** to proceed. The network connection will now be activated.

If you are using either FTP or HTTP, you will automatically proceed to the Mirrors section

If you are using NFS, you will be asked for the NFS server name and the directory containing the Mageia distribution:

Please fill in entries	
Please enter the name or IP address of your NFS server, and the directory containing the Mageia Distribution.	
NFS server name Mageia directory	
Ok Cancel	

After entering the NFS details, you will automatically proceed to <u>Stage 2</u> (the actual installation stage).

2.4. Mirrors

If using FTP or HTTP, you now have to specify a mirror to use. This can be done manually or by choosing from a list

2.4.1. Specify Manually

You will find a list of all available mirrors here: http://mirrors.mageia.org/

Whichever mirror you choose, it should use the same tree-like structure from "mageia" (or "Mageia") as used by the official Mageia mirrors. That means .../mageia/distrib/<version>/<arch>

A correct entry (when using an official mirror) in the Mageia directory field below, could be:

pub/linux/mageia/distrib/cauldron/i586

Another example (for Mageia 6 x86_64) could be:

pub/Mirrors/Mageia/distrib/6/x86_64

Other mirrors may have a different path structure and the screenshots below show such examples:

If you are using an FTP server:

Please fill in entries	
Please enter the name or IP address of the FTP server, the directory containing the Mageia Distribution, and the login/pass if necessary (leave login blank for anonymous).	
FTP serverftp.belnet.be_Mageia directory/mirror/mageia/distrib/6/x86_64LoginPassword	
Ok Cancel	

If you are using an HTTP server:

Once this information has been provided, you will automatically proceed to <u>Stage 2</u> (the actual installation stage).

2.4.2. Select From a List

Falta den mendekotasun asko jasotzen baduzu instalatzean, berrabiarazi eta beste ispilu bat probatu.

Please choose.	
Please select a mirror from t	he list below.
Specify the mirror man vodka.sublink.org ftp.twaren.net ftp.cc.uoc.gr ftp-stud.hs-esslingen. ftp.belnet.be ftp.linux.org.tr	
Ok	Cancel

After choosing an FTP server, you will see a screen where you can optionally add a login name and password if required.

Once this information has been provided, you will automatically proceed to <u>Stage 2</u> (the actual installation stage).

3. Stage 2 (Installation Stage)

Nothing has been written to your hard disk at this point. Therefore, if you decide not to proceed with the actual installation, then it is safe to reboot now: go to tty2 with Ctrl+Alt+F2 and press Ctrl+Alt+Del (or Ctrl+Alt+F7 to come back if you change your mind).

3.1. Aukeratu erabiltzeko hizkuntza bat

- Select your preferred language, by first expanding the list for your continent. Mageia will use this selection during the installation and for your installed system.
- If it is likely that you (or others) will require several languages to be installed on your system, then you should use the *Multiple languages* option to add them now. It will be difficult to add extra language support after installation.

é	▶ Multiple languages		
~~	▶ Help		Next

Even if you choose more than one language, you must first choose one as your preferred language from the main list of languages. It will also be marked as chosen in the *Multiple languages* screen.

- If your keyboard language is not the same as your preferred language, then it is advisable to install the required language for your keyboard as well
- Mageia uses UTF-8 (Unicode) support by default. This may be disabled in the *Multiple languages* screen if you know that it is inappropriate for your language. Disabling UTF-8 applies to all installed languages.
- You can change the language for your system post-installation in the Mageia Control Center → System
 → localization for your system.

3.2. Lizentzia eta Askatze Oharrak

Ömageia	LIZENTZIA-KONTRATUA
INSTALAKETA Hizkuntza • Lizentzia • Partizioa egiten • Instalatzen • KONFIGURAZIOA Erabiltzaileak • Laburpena • Eguneraketak • Irten •	Sarrera Mageia banaketan eskuragarri dauden sistema eragile eta osagai desberdinei aurrerantzean "Software Produktuak" izendatuko zaie. DrakX will normally detect hard disks correctly. However, with some older SCSI controllers it may be unable to determine the correct drivers to use and subsequently fail to recognise the drive.

If your device is not recognised, you will need to manually tell DrakX which SCSI drive(s) you have. DrakX should then be able to configure the drive(s) correctly.

3.4. Instalatu edo Berritu

• Install

Use this option to perform a fresh installation of Mageia. This will format the root partition (/), but can preserve a pre-existing /home partition (a dedicated /home partition, rather than being incorporated within the root (/) partition itself).

Upgrade

Use this option to upgrade an existing installation of Mageia.

Only upgrading from a previous Mageia version that was *still supported* when this Installer's version was released, has been thoroughly tested. If you want to upgrade a Mageia version that has reached its "End Of Life" then it is better to do a "clean" install instead, while preserving your /home partition.

If you have discovered that you forgot to select an additional language, you can return from the *Install or Upgrade* screen to the language choice screen by pressing **Ctrl**+**Alt**+**Home**. Do **NOT** do this later in the install.

3.5. Teklatua

DrakX zure hizkuntzarako teklatu egokia hautatuko du. Teklatu bateragarria ez bada aurkitzen, Amerikar teklatua aukeratuko da.

Ö mageja	TEKLATUA	
INSTALAKETA Hizkuntza • Lizentzia Partizioa egiten Instalatzen KONFIGURAZIOA Erabiltzaileak Laburpena Eguneraketak Irten	Aukeratu zure teklatu-diseinua errumaniarra (qwertz) errusiarra errusiarra (fonetikoa) eslovakiarra (QWERTY) eslovakiarra (QWERTZ) esloveniarra estoniarra finlandiarra finlandiarra frantsesa georgiarra (diseinu "errusiarra") georgiarra (diseinu "latinoa") rrekoa	
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~	▶ Laguntza	Hurrengoa

- Ziurtatu aukeraketa zuzena edo hautatu beste teklatu diseinu bat. Ez badakizu zein den zure teklatuaren diseinu zuzena, zure sistemarekin batera datozen zehaztapenak begiratu edo zure saltokian galdetu. Bada, beharbada, zure teklatua identifikatzen duen etiketa bat izango du. Hemen ere begiratu dezakezu: <u>es.wikipedia.org/wiki/Distribución_del_teclado</u> [http://es.wikipedia.org/wiki/Distribuci%C3%B3n_del_teclado]
- If your keyboard isn't in the list shown, click on *More* to get a fuller list, and select your keyboard there.

After choosing a keyboard from the *More* dialogue, you'll return to the first keyboard choice dialogue and it will seem as though a keyboard from that screen was chosen. You can safely ignore this and continue the installation: the keyboard chosen from the full list will be applied.

• If you choose a keyboard based on non-Latin characters, you will see an extra dialogue screen asking how you would prefer to switch between the Latin and non-Latin keyboard layouts

# 3.6. Partitioning

## 3.6.1. Suggested Partitioning

In this screen you can see the content of your hard drive(s) along with the DrakX partitioning proposals for where to install Mageia.

The actual options available from those shown below will vary according to the layout and content of your particular hard drive(s).

Ömageia	PARTIZIOA EGITEN
INSTALAKETA Hizkuntza • Lizentzia • Partizioa egiten Instalatzen • KONFIGURAZIOA Erabiltzaileak Laburpena • Eguneraketak Irten •	Hemen dago zure disko unitatearen edukia Fujitsu MHZ2320B (298GB)   SYSTEM_DRV Windows7_OS   DrakX Partizio-morroiak irtenbide hauek aurkitu ditu:   Erabili leku librea   SYSTEM_DRV   Windows7_OS   Lehendik dauden partizioak erabili   Erabili Microsoft Windows7_OS   Windows (73GB)   Mageia (24GB)   Ezabatu eta erabili disko osoa
	▶ Laguntza Hurrengoa

Main Options

#### • Use Existing Partitions

Aukera hori eskuragarri badago, orduan Linux partizioak bateragarria aurkitu egin dira eta instalazioa erabili ahal izango du.

#### • Use Free Space

Erabili gabeko espazio baduzu zure disko gogorrean orduan aukera hau erabiliko da zure Mageia instalazio berriarentzat.

#### • Use Free Space on a Windows Partition

If you have unused space on an existing Windows partition, the installer may offer to use it. This can be a useful way of making room for your new Mageia installation, but is a risky operation so you should make sure you have backed up all important files!

With this option, the installer displays the remaining Windows partition in light blue and the proposed Mageia partition in dark blue with their intended sizes just underneath. You have the option to modify these sizes by clicking and dragging the gap between both partitions. See the following screenshot:

#### • Erase and use Entire Disk

This option will allocate the entire drive for Mageia

This will erase ALL data on the selected hard drive. Take care! If you intend to use part of the disk for something else, or you already have data on the drive that you are not prepared to lose, then do not use this option.

Kontutan prozedura hori dakar Windows partizioaren tamaina murrizteko. Partizio honek "garbi" egon beharko du, hau da, Windows azken aldiz erabili denean ondo itxita egon behar du. Halaber desfragmentatuta egon behar du, baina horrek ez du bermatzen partizioko fitxategi guztiak mugitu egin direla erabiliko den eremutik kanpo. Hori dela eta, Guztiz gomendagarria da zure fitxategi pertsonalaren babeskopia bat egitea.

#### Custom Disk Partitioning

Honek erabateko kontrola ematen dizu instalazioan jartzen zure disko gogorrean.

If you are not using the *Custom disk partitioning* option, then the installer will allocate the available space according to the following rules:

- If the total available space is less than 50 GB, then only one partition is created. This will be the / (root) partition.
- If the total available space is greater than 50 GB, then three partitions are created
  - 6/19 of the total available place is allocated to  $\,/\,$  with a maximum of 50 GB
  - 1/19 is allocated to swap with a maximum of 4 GB
  - the rest (at least 12/19) is allocated to /home

This means that from 160 GB or greater available space, the installer will create three partitions:

- 50 GB for /
- 4 GB for swap
- and the remainder for /home

If you are using a UEFI system, the ESP (EFI System Partition) will be automatically detected - or created if it does not exist yet - and mounted on /boot/EFI. The *Custom disk partitioning* option is the only one that allows to check it has been correctly done.

If you are using a Legacy (also known as BIOS) system with a GPT partitioned disk, you need to create a BIOS boot partition if it doesn't already exist. It should be about 1 MiB with no mount point. It can be created with the Installer, under *Custom disk partitioning*, like any other partition. Be sure to select "BIOS boot partition" for filesystem type.

See **DiskDrake** for information on how to proceed.

Some newer drives are now using 4096 byte logical sectors, instead of the previous standard of 512. Due to lack of available hardware, the partitioning tool used in the installer has not been tested with such a drive.

Some SSD devices now use an erase block size over 1 MB. If you have such a device we suggest that you partition the drive in advance, using an alternative partitioning tool like gparted, and to use the following settings:

- *Align to* = MiB
- Free space preceding (MiB) = 2

Also make sure all partitions are created using an even number of megabytes.

#### 3.6.2. Aukeratu muntatze-puntuak

Here you see the Linux partitions that have been found on your computer. If you don't agree with the DrakX suggestions, you can change the mount points yourself.

- To the left of the drop-down menus is a list of available partitions. For example: sda is a hard drive and 5 is a *partition number*, followed by the *(capacity, mount point, filesystem type)* of the partition.
- If you have several partitions, you can choose various different *mount points* from the drop down menu, such as /, /home and /var. You can even make your own mount points, for instance /video for a partition where you want to store your films, or perhaps /Data for all your data files.
- For any partitions that you don't need to make use of, you can leave the mount point field blank.

If you make any changes here, ensure you still have a / (root) partition.

If you are not sure what to choose, click *Previous* to go back and then tick *Custom disk partitioning*, where you can click on a partition to see its type and size. If you are sure the mount points are correct, click on *Next*, and choose whether you only want to format the partition suggested by DrakX, or more.

# 3.6.4. Custom Disk Partitioning with DiskDrake

- Modify the layout of your disk(s) here. You can remove or create partitions, change the filesystem or size of a partition and even view their details before you start.
- There is a tab at the top for every detected hard disk (or other storage device, like a USB key). In the screenshot above there are two available devices: sda and sdb.
- For all other actions: click on the desired partition first. Then view it, or choose a filesystem and a mount point, resize it or wipe it. *Expert mode* provides more options such as to label (name) a partition, or to choose a partition type.
- Continue until you have adjusted everything to your satisfaction, then click *Done* when you're ready.

- 1. Take care with the *Clear all* option, use it only if you are sure you want to wipe all partitions on the selected storage device.
- 2. If you wish to use encryption on your / partition you must ensure that you have a separate / boot partition. The encryption option for the /boot partition must NOT be set, otherwise your system will be unbootable.

- If you are installing Mageia on a UEFI system, check that an ESP (EFI System Partition) is present and correctly mounted on /boot/EFI. See Figure 1 below.
- If you are installing Mageia on a Legacy/GPT system, check that a BIOS boot partition is present and of the correct type. See Figure 2 below.

Here you can choose which partition(s) you wish to format. Any data on partitions *not* marked for formatting will be preserved.

Usually, at least the partitions that DrakX selected need to be formatted.

Click on Advanced to choose the partitions you want to check for so-called bad blocks

If you're not sure you have made the right choice, you can click on *Previous*, again on *Previous* and then on *Custom* to get back to the main screen, where you can choose to view details of your partitions.

When you are confident about the selections, click on Next to continue.

	▶ Laguntza	Hurrengoa

This screen shows you the list of already recognised repositories. You can add other sources for packages, like an optical-disc or a remote source. The source selection determines which packages will be available during the subsequent steps.

Sare iturri batentzat, bi pausu jarraitu beharko ditugu:

- 1. Choosing and activating the network, if not already up.
- 2. Selecting a mirror or specifying a URL (very first entry). By selecting a mirror, you have access to the selection of all repositories managed by Mageia, like the *Nonfree*, the *Tainted* repositories and the *Updates*. With the URL, you can designate a specific repository or your own NFS installation.

If you are updating a 64-bit installation which may contain some 32-bit packages, it is advised to use this screen to add an online mirror by selecting one of the Network protocols here. The 64-bit DVD ISO only contains 64-bit and *noarch* packages, it will not be able to update the 32-bit packages. However, after adding an online mirror, the installer will find the needed 32-bit packages there.

#### 3.7.1.2. Available Media

A	
Ömageia	EUSKARRI HAUTAKETA
-	
INSTALAKETA Hizkuntza ●	Here you can enable more media if you want. Some hardware on your machine needs some non free firmwares in order for the free software drivers to work. You should enable "Nonfree Release"

Hemen eskuragarri dauden biltegien zerrenda bat. Biltegi guztiak ez daude eskuragarri, instalaziorako erabilitako baliabidearen arabera. Biltegien aukeraketa hurrengo urratsetan hautagai izagon diren paketeak zehaztuko ditu.

- Core biltegia ezin da desaktibatu, distribuzioaren oinarria daukanez gero.
- The *Nonfree* repository includes packages that are free-of-charge, i.e. Mageia may redistribute them, but they contain closed-source software (hence the name Nonfree). For example this repository includes nVidia and AMD graphics card proprietary drivers, firmware for various WiFi cards, etc.
- The *Tainted* repository includes packages released under a free license. The main criteria for placing packages in this repository is that they may infringe patents and copyright laws in some countries, e.g. multimedia codecs needed to play various audio/video files; packages needed to play commercial video DVD's, etc.

## 3.7.2. Idaztegi hautaketa

Some choices made here will open other screens with related options.

After the selection step(s), you will see a slideshow during the installation of required packages. The slideshow can be disabled by pressing the *Details* button.

Packages are arranged into common groups, to make choosing what you need on your system a lot easier. The groups are fairly self explanatory, however more information about the content of each is available in tool-tips which become visible as the mouse is hovered over them.

- Workstation
- Server
- Graphical Environment
- Individual Package Selection: you can use this option to manually add or remove packages

See Minimal Install for instructions on how to do a minimal install (without or with X & IceWM).

## 3.7.4. Instalazio Minimoa

Minimal Installation is intended for those with specific uses in mind for Mageia, such as a server or a specialised workstation. You will probably use this option combined with the *Individual package selection* option to fine-tune your installation. See <u>Choose Packages Tree</u>.

• You can choose a *Minimal Installation* by de-selecting everything in the *Package Group Selection* screen, see <u>Choose Package Groups</u>.

If desired, you can additionally tick the Individual package selection option in the same screen.

• If you choose this installation method, then the relevant screen (see screenshot below) will offer you a few useful extras to install, such as documentation and "X".

If the *With X* option is selected, then IceWM (a lightweight desktop environment) will also be included.

The basic documentation is provided in the form of "man" and "info" pages. It contains the man pages from the <u>Linux Documentation Project</u> [http://www.tldp.org/manpages/man.html] and the <u>GNU coreutils</u> [http://www.gnu.org/software/coreutils/manual/] info pages.

# 3.8.1. Ezarri administratzaile (root) pasahitza:

It is advisable for all Mageia installations to set a superuser (Administrator) password, usually called the *root* password in Linux. As you type a password into the top box a shield will change from red-to-yellow-to-green depending on the strength of the password. A green shield shows you are using a strong password. You need to repeat the same password in the box underneath, to check that the first entry was not mistyped.

All passwords are case-sensitive. It is best to use a mixture of letters (upper and lower case), numbers and other characters in a password.

## 3.8.2. Sartu erabiltzaile bat

Add a User here. A regular user has fewer privileges than the superuser (root), but enough to use the Internet, office applications or play games and anything else the average user might use a computer for.

• Icon

Click on this button if you want to change the user's icon

• Real Name

Insert the user's real name into this text box

• Login Name

Enter the user login name or let DrakX use a version of the user's real name. **The login name is case-sen-***sitive.* 

Password

Type in the user password. There is a shield at the end of the text box that indicates the strength of the password. (See also <u>Oharra</u>)

Password (again): Retype the user password. DrakX will check that you have not mistyped the password.

Any users added while installing Mageia, will have a home directory that is both read and write protected (umask=0027)

You can add any extra needed users in the *Configuration - Summary* step during the install. Choose *User management*.

Sarbide baimena instalatu ondoren ere aldatu egin daiteke.

#### 3.8.3. User Management (advanced)

The Advanced option allows you to edit further settings for the user you are adding.

- *Shell*: This drop-down list allows you to change the shell available to any user you added in the previous screen. Options are Bash, Dash and Sh
- *User ID*: Here you can set the user ID for any user you added in the previous screen. If you are unsure what the purpose of this is, then leave it blank.
- Group ID: This lets you set the group ID. Again, if unsure, leave it blank.

3.9. Txartel Grafikoa eta Pantaila Konfigurazioa

	🕨 Laguntza	Hurrengoa	J

No matter which graphical environment (also known as desktop environment) you chose for this install of Mageia, they are all based on a graphical user interface system called X Window System, or simply "X". So in order for KDE Plasma, GNOME, LXDE or any other graphical environment to work well, the following "X" settings need to be correct.

Choose the appropriate settings manually if you think the details are incorrect, or if none are shown.

• Graphic Card

If you need to, you can select a specific card from this expandable list. See ???.

• Monitor

You can choose Plug 'n Play, if applicable, or choose your monitor from the *Vendor* or *Generic* lists. Choose *Custom* if you prefer to manually set the horizontal and vertical refresh rates of your monitor. See <u>???</u>.

Resolution

The resolution and color depth of your monitor can be set here.

• Test

The test button does not always appear during install. If the option is there, and you test your settings, you should be asked to confirm that your settings are correct. If you answer *Yes*, the settings will be kept. If you don't see anything, you'll return to the configuration screen and be able to reconfigure everything until the test result is satisfactory. If the test option is not available, then make sure your settings are on the safe side.

• Options

Here you can choose to enable or disable various options.

There is a risk of damaging a monitor if you choose refresh rates that are outside the frequency range of that monitor. This applies to older CRT displays: modern monitors will reject an unsupported frequency and normally enter standby mode.

# 3.10. Bootloader

## 3.10.1. Grub2

Grub2 on Legacy MBR/GPT systems

- GRUB2 (with or without graphical menu) will be used exclusively as the bootloader for a Legacy/MBR or Legacy/GPT system.
- By default, a new bootloader will be written into either the MBR (Master Boot Record) of your first hard drive or in the BIOS boot partition.

## Grub2-efi on UEFI systems

- GRUB2-efi will be used exclusively as the bootloader for a UEFI system.
- By default, a new bootloader (Grub2-efi) will be written into the ESP (EFI System Partition).

If there are already UEFI-based operating systems installed on your computer (Windows 8 for example), the Mageia installer will detect the existing ESP created by Windows and add grub2-efi to it. If no ESP exists, then one will be created. Although it is possible to have several ESPs, only one is required, whatever the number of operating systems you have.

# 3.10.2. Bootloader Setup

#### 3.10.2.1. Abio kargatzailearen aukera nagusiak

#### Bootloader to use

This feature is only available to Legacy MBR/BIOS systems. Users of UEFI systems will not see this option here.

• Boot device

Don't change this unless you really know what you are doing

• Delay before booting the default image

This text box lets you set a delay, in seconds, before the default operating system is started up.

• Security

This allows you to set a password for the bootloader. This means a username and password will be required when booting in order to select a booting entry or change settings. This is optional, and most people are not likely to have a need for it. The username is root and the password is the one chosen hereafter.

• Password

Choose a password for the bootloader (optional)

• Password (again)

Retype the password and DrakX will check that it matches with the one set above

Advanced

• Enable ACPI

ACPI (Advanced Configuration and Power Interface) is a standard for power management. It can save energy by stopping unused devices. Deselecting it could be useful if, for example, your computer does not support ACPI or if you think the ACPI implementation might cause some problems (for instance random reboots or system lockups).

• Enable SMP

This option enables/disables symmetric multiprocessing for multi-core processors

• Enable APIC

Enabling this gives the operating system access to the Advanced Programmable Interrupt Controller. APIC devices permit more complex priority models, and Advanced IRQ (Interrupt Request) management.

• Enable Local APIC

Here you can set Local APIC, which manages all external interrupts for a specific processor in an SMP system

### 3.10.2.2. Bootloader Configuration

• Default

The operating system to be started up by default.

Append

This option lets you pass information to the kernel or tell the kernel to give you more information as it boots.

• Probe foreign OS

If you already have other operating systems installed, Mageia attempts to add them to your new Mageia boot menu. If you don't want this behaviour, then untick the Probe Foreign OS option.

Advanced

• Video mode

This sets the screen size and colour depth to be used by the boot menu. If you click the down-triangle you will be offered other size and colour depth options.

• Do not touch ESP or MBR

Select this option if you don't want a bootable Mageia, but would rather chain-load it from another OS. You will get a warning that the bootloader is missing. Click *Ok* if you are sure you understand the implications, and wish to proceed.

## 3.10.3. Other Options

### 3.10.3.1. Existitzen den abio kargatzaile bat erabiliz

The exact procedure for adding Mageia to an existing bootloader is beyond the scope of this documentation. However in most cases it will involve running the relevant bootloader installation program, which should detect Mageia and automatically add an entry for it in the bootloader menu. See the documentation for the relevant operating system.

### 3.10.3.2. Installing Without a Bootloader

While you can opt to install Mageia without a bootloader (see section 2.1 Advanced), this is not recommended unless you absolutely know what you are doing, as without some form of bootloader your operating system will be unable to start.

### 3.10.3.3. Gegitu edo Aldatu Abio Menuko Sarrera

To do this you need to manually edit /boot/grub2/custom.cfg or use the software **grub-customizer** tool instead (available in the Mageia repositories).

# 3.11. Configuration Summary

DrakX presents a proposal for the configuration of your system depending on the choices you made and on the hardware detected. You can check the settings here and change them if you want by pressing *Configure*.

As a general rule, it is recommended that you accept the default settings unless:

- Badago arazo ezagun bat ezarpen lehenetsiarekin
- Dagoeneko ezarpen lehenetsia probatu dae eta porrot egin du
- some other factor mentioned in the detailed sections below is an issue

### 3.11.1. Sistema parametroak

• Timezone

DrakX selects a timezone for you, depending on your preferred language. You can change it if needed. See also <u>Configure Timezone</u>

• Country / Region

If the selected country is wrong, it is very important that you correct the setting. See Select Country

Bootloader

DrakX proposal for the bootloader setting

Do not change anything, unless you know how to configure GRUB2. For more information, see Bootloader

• User management

You can add extra users here. They will each be allocated their own /home directories.

Services

System services refer to those small programs which run in the background (daemons). This tool allows you to enable or disable certain processes.

You should check carefully before changing anything here - a mistake may prevent your computer from operating correctly. For more information, see <u>Configure Services</u>

### 3.11.2. Hardware parametroak

### • Keyboard

Configure your keyboard layout according to your location, language and type of keyboard.

Teklatuaren diseinu oker bat nabaritzen baduzu eta aldatu nahi baduzu, kontuan izan zure pasahitzak ere aldatu egingo direla.

#### • Mouse

Hemen gehitu edo konfiguratu dezakezu beste gailu batzuk, tabletak, trackballs, etab

• Sound card

The installer will use the default driver if one is available.

If there is no actual default driver for your sound card, there may be other possible alternative drivers available to choose from. If this is the case, but you think the installer has not made the most appropriate choice, you can click on *Advanced* to manually specify a driver.

• Graphical interface

This section allows you to configure your graphics card(s) and displays. For more information, see <u>Ata-</u> la 3.9, "Txartel Grafikoa eta Pantaila Konfigurazioa"

### 3.11.3. Sare eta Internet parametroak

### Network

You can configure your network here, but for network cards with non-free drivers it is better to do that after reboot, using the Mageia Control Center, if you have not yet enabled the *Nonfree* media repositories.

When you add a network card, do not forget to set your firewall to monitor that interface as well.

### Proxies

A Proxy Server acts as an intermediary between your computer and the wider Internet. This section allows you to configure your computer to utilize a proxy service.

You may need to consult your systems administrator to obtain the parameters you need to enter here.

### 3.11.4. Segurtasuna

### • Security Level

The Security level for your computer, in most cases the default setting (Standard) is adequate for general use. Select the option which best suits your usage.

### • Firewall

The firewall allows you to manage which network connections are allowed on your computer. The safe and secure default is to allow ZERO inbound connections. This does not stop you connecting outbound and using your computer normally.

Please be aware that the Internet is a high risk network where there are continuous attempts to probe and attack systems. Even seemingly "safe" connections such as ICMP (for ping) have been used as covert data channels for exfiltrating data by malicious persons.

For more information, see Firewall.

Bear in mind that allowing everything (no firewall) may be very risky.

### Please choose the desired security level

Standard is the default, and recommended setting for the average user.

Secure will create a highly protected system - for instance if the system is to be used as a public server.

### **Security Administrator**

This item allows you to configure an email address to which the system will send *security alert messages* when it detects situations which require notification to a system administrator.

A good, and easy-to-implement, choice is to enter <user>@localhost - where <user> is the login name of the user to receive these messages.

The system sends such messages as **Unix Mailspool messages**, not as "ordinary" SMTP mail: this user must therefore be configured for receiving such mail!

It will always be possible to adjust your security settings post-install in the *Security* section of the Mageia Control Center.

## 3.17. Suhesia

This section allows you to configure some simple firewall rules: they determine which type of message from the Internet will be accepted by the target system. This, in turn, allows the corresponding services on the system to be accessible from the Internet.

In the default setting (no button is checked), no service of the system is accessible from the network. The *Everything (no firewall)* option enables access to all services of the machine - an option that does not make much sense in the context of the installer since it would create a totally unprotected system. Its veritable use is in the context of the Mageia Control Center (which uses the same GUI layout) for temporarily disabling the entire set of firewall rules for testing and debugging purposes.

All other options are more or less self-explanatory. As an example, you will enable the CUPS server if you want printers on your machine to be accessible from the network.

### Aurreratua

The *Advanced* option opens a window where you can enable a series of services by typing a list of "couples" (blank separated)

<port-number>/<protocol>

- *<port-number>* is the value of the port assigned to the service you want to enable (e.g. 873 for the RSYNC service) as defined in *RFC-433*;

- <protocol> is one of TCP or UDP - the internet protocol that is used by the service.

Adibidez, RSYNC zerbitzurako sarbidea gaitzeko sarrera 873/tcp da.

Bi protokoloak erabiltzeko zerbitzu bat martxan jartzen denean, 2 bikote zehazten dira portu bererako.

## 3.18. Eguneraketak

Ömageia	EGUNERAKETAK
INSTALAKETA Hizkuntza • Lizentzia • Partizioa egiten • Instalatzen • KONFIGURAZIOA Erabiltzaileak • Laburpena •	Pakete eguneratuak deskarga ditzakezu orain. Pakete hauek eguneratu egin dira banaketaren ondoren. Beharbada segurtasun edo akatsen konponketak izango dituzte. Pakete hauek deskargatzeko, Interneteko konexioa izan behar duzu. Eguneratzeak instalatu nahi dituzu?
Eguneraketak • Irten •	Ez
	▶ Laguntza Hurrengoa

Since this version of Mageia was released, some packages will have been updated or improved.

• Select Yes if you wish to download and install them

- Select No if you don't want to do this now, or if you aren't connected to the Internet
- Press Next to continue

## 3.19. Zorionak

Ömageja	ZORIONAK
INSTALAKETA Hizkuntza • Lizentzia • Partizioa egiten • Instalatzen • KONFIGURAZIOA Erabiltzaileak • Laburpena • Eguneraketak •	Zorionak, instalazioa burutu da. Atera abioko diskoa eta sakatu itzulera-tekla berrabiarazteko. Mageia-en bertsio honetarako erabilgarri dauden konponbideen informaziorako, kontsultatu Erratak helbide honetan: http://www.mageia.org/ Zure sistema konfiguratzeko informazioa Mageia-en Erabiltzailearen Gida Ofizialeko instalatu ondorengo azalpenei buruzko kapituluan duzu. I
	▶ Laguntza Berrabiarazi

You have finished installing and configuring Mageia and it is now safe to remove the installation medium and reboot your computer.

After rebooting, you can use the bootloader screen to choose which operating system to start (if there are more than one on your computer).

Zuk ez badituzu abio kargatzaile ezarpenak doitzen, zure Mageia instalazioa automatikoki hautatu eta hasiko da.

Gozatu!

Visit <u>www.mageia.org/en/</u> [http://www.mageia.org/en/] if you have any questions or want to contribute to Mageia

## 3.20. Mageia desinstalatzen

If Mageia didn't convince you or you can't install it correctly - in short you want get rid of it - that is your right and Mageia also gives you the possibility to uninstall. This is not true for every operating system.

After backing up your data, reboot your Mageia installation DVD and select *Rescue system*, then *Restore Windows boot loader*. At the next boot, you will only have Windows, with no option to choose your Mageia operating system.

In Windows, to recover the space used by Mageia partitions: click on Start  $\rightarrow$  Control Panel  $\rightarrow$  Administrative

Tools  $\rightarrow$  Computer Management  $\rightarrow$  Storage  $\rightarrow$  Disk Management. You will recognise a Mageia partition because they are labeled Unknown, and also by their size and place on the disk. Right-click on each of these partitions and select *Delete* to free up the space.

If you are using Windows XP, you can create a new partition and format it (FAT32 or NTFS). It will then get a partition letter.

If you have Vista or 7, you have one more possibility, you can extend the existing partition that is at the left of the freed space. There are other partitioning tools that can be used, such as **gparted**, available for both Windows and Linux. As always, when changing partitions, be very careful to back up anything important to you.
